### 4. Course Learning Outcomes (CLOs): Students should be able to:

- CLO 1. To understand key mathematical concepts, namely, proof techniques and asymptotic notation, etc. as well as key algorithm design paradigms, namely, divide-and-conquer, dynamic programming, greedy algorithm, brute-force search, backtracking, and branch & bound, etc.
- CLO 2. To analyze the temporal and the spatial complexity of any given algorithm using the knowledge of algebra, probabilistic analysis, and asymptotic notation
- CLO 3. To apply the knowledge of algorithms learned in the lectures to solve relevant computational problems
- CLO 4. To analyze the correctness of algorithms using proof techniques such as proof by contradiction and induction

Remark: 1. Guidelines according to Bloom's Taxonomy is available at [https://courses.dcs.wisc.edu/design-teaching/PlanDesign\\_Fall2016/2-Online-Course-Design/2\\_Learning-Objectives-Alignment/6\\_objectives\\_blooms-taxonomy.html](https://courses.dcs.wisc.edu/design-teaching/PlanDesign_Fall2016/2-Online-Course-Design/2_Learning-Objectives-Alignment/6_objectives_blooms-taxonomy.html)

Program: **ECE**  
Degree Level: Master

Faculty/College: TGGs

2. For the master level course, CLOs should be “apply” and “analyze” or possibly consider the doctoral CLOs “evaluate” and “create”. “Remember” and “Understand” are for the undergraduate level courses, however, they can be implemented only at the beginning of the course.

3. CLOs can be defined as many as appropriate for the course.

### 5. The mapping between Expected Learning Outcomes (ELOs) from the curriculum and Course Learning Outcomes (CLOs)

**Table 5.1 ELOs-CLOs Consistency** (for a subject-specific course/ a specific curriculum)

Remark: All ELOs and CLOs for the course (highlighted row) are as written in the Official Approved Curriculum.

ELOs/CLOs consistency	CLO 1	CLO 2	CLO 3	CLO 4	CLO 5

Remark: \* Lecture on the concept of the topic is introduced with basic or fundamental definitions, visualization, and correlations. For the complicated equation, the derivation from the basic laws can be shown to students. So, the students do not memorize the equations but understand the basic concept and basic equation. The lecturer will introduce the advanced

and new concepts, technologies, and findings to students from publications such as journals and websites and from the research and industrial experiences.

*\*\* Active learning by asking questions related to the topic in the lecture and encouraging the students to respond to the questions. If the students cannot respond with answers, then the lecturer will give some guidance until the students can respond.*

*\*\*\* Quiz in the closed-book format on the basic concepts and equations with simple problem solving to evaluate their learning. The solution will be given to students after grading, so they can identify their mistakes and weakness.*

*\*\*\*\* Exam on the basic concepts and equations with simple problem-solving in the closed-book format as a review, whereas the complicated/integrated problem solving will be worked in the open-book format.*
